

# Portable Vacuum Solutions

## Brewery Pit Cleaning 2020

### Challenge

A brewery had employed the services of a contractor to clear the significant grain build-up under a large conveyor. The area was too constricted to allow clearing by mechanical means and, as usual, there were time constraints.

### Requirement

The contractor contacted Portable Vacuum Solutions who were able to deliver a hopper mounted 37KW machine on short-term hire. The hopper was configured in such a way as to allow the vacuumed grain to be loaded directly into a 1 tonne FIBC for easy disposal.

### Solution/Result

The vacuum system was able to be installed close to the conveyor and was delivered with all the necessary tools for effective work in a constricted area. The contractor was able to complete within the time available.
