

Portable Vacuum Solutions

Fixed Vacuum System with Pipework 2020

Requirement

While mobile vacuum systems work well in most situations, for some factories a large static machine linked to outlets strategically located around the factory floor by fixed piping may be a better alternative. This was the case with this calcium carbonate processor.

Solution/Result

Over one hundred and fifty metres of pipework and six outlets were installed. Such is the power of the 22KW Univac machine that with fifteen metres of flexible hose fitted with one of the end tools, there is more than enough vacuum, even at the outlet furthest away from the machine.
