

Portable Vacuum Solutions

Grain Mills Cleaning 2020

Challenge

A machine that was highly mobile, that could be easily handled by one operative and which was sensibly priced. The machine was going to be used for routine maintenance in a grain mill environment.

Requirement

The owners of this grain mill contacted Portable Vacuum Solutions. The call coincided with the launch of Univac BL15 AV. This is the ideal vacuum machine for everyday factory maintenance. Highly mobile and with an easy to remove, built-in hopper.

Solution/Result

The BL15 AV can handle a wide range of different powders and granular materials and is the ideal machine for routine factory – or mill – maintenance. It also has enough power to cope with minor material spillages. A version certified to ATEX22 is available.
