

Portable Vacuum Solutions

Polymer Business Site Spillage 2020

Challenge

Much of what Portable Vacuum Solutions is asked to help with are spillages. A conveyor breakdown at this Midlands based polymer processor needed clearing urgently.

Requirement

A vacuum system that could clear the powdered polymer quickly and that could be delivered within twenty-four hours so that work could continue.

Solution/Result

Portable vacuum Solutions was able to supply an 18.5 KW machine on short-term hire within the time frame. The machine proved more than capable of clearing the spillage and now the company is considering the purchase or long-term hire of a similar machine.
